

Infrared BBQ Grill

The BBQ Grill from Victory Lighting provides a fast, safe & energy efficient grilling experience.

Due to the way in which IR creates heat by penetrating an object, the food will be cooked evenly throughout giving the user peace of mind that their culinary creations are ready for consumption.

The grill provides temperatures up to 300°C and has two separate grilling zones

Although many people will look at the grill for dining outside, it is also safe to use indoors as there is virtually no smoke created and there are no dangerous gases or charcoal used in the cooking process.

In addition, the grill can be used in residential complexes i.e., on balconies or gardens where traditional BBQ grills may have local authority or landlord restrictions.

In the summer of 2022, the UK experienced a heat wave which led to restrictions on the use of charcoal and gas BBQs due to the risk of fire. With the infrared grill there are no such restrictions as there are no flames or hot cinders to cause a fire hazard.

The steel construction allows for easy cleaning after use.
