

PLATINUM

The new gold standard

Victory Platinum lamps are the first infrared heat lamps to have virtually no light output. This can only be achieved by Victory's patented technology. Infrared heat is no longer just for smoking areas; these lamps are perfect for stylish living and upmarket retailing.

Unique, patented coating

Victory Platinum infrared lamps are the most advanced infrared heat lamps on the market.

The technically advanced, patented, coating on Victory platinum lamps is a formula that is the result of years of research by the Victory R&D team. It filters out visible light, especially the red light associated with many 'low glare' lamps. The lamps are perfect for high-end heaters that combine style with the best possible performance.

Victory Platinum lamps have the lowest light output on the market — up to six times less than competitors.

Victory Platinum lamps are available as an option on most Victory infrared heaters or can be used as replacements in existing installations. They are also available to OEM's.

HIGH efficiency, LOW glare

- Virtually no visible light
- Highly efficient.
- Customisable for OEMs, with choice of cap
- Wattage up to 2kW

No more red

Many 'low glare' infrared lamps have a gold coating that reduces visible light output, but is not effective in filtering out red light. In many situations this red light is not desirable.

Victory Platinum lamps eliminate nearly all visible light, including red.

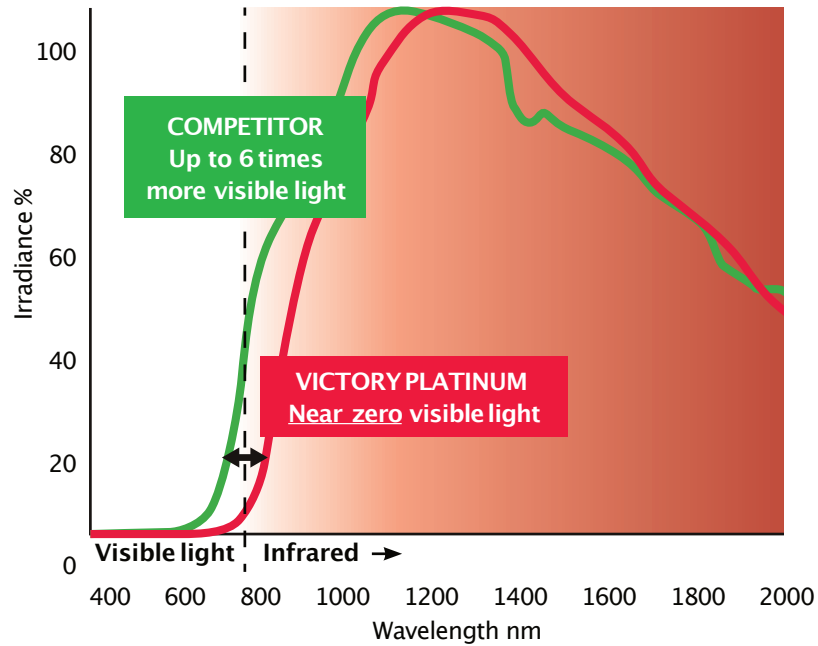

Technical Data Platinum infrared lamp

Less light, more heat ▶

Competitors' lamps emit 3-6 times more visible and red light.

How it works ▼

Victory's patented Platinum coating is an advanced high precision optical coating which filters visible light and allows infrared to pass through, which means the lamp is virtually free of visible light.
