

VICTORY  
INFRARED

Your Partner in IR  
and UV Technology

To Unravel Your Full Potential in Textiles

## Why work With Us?

With over 30 years' experience in the industry, we are committed to maximising Infrared & UV technology to the benefit of our customers.

We are...

**DEDICATED** to finding the right solution

**NIMBLE AND FLEXIBLE**

**PRICE COMPETITIVE** so you can experience the benefits of our solution

We already work in a number of different industries that benefit from our IR lamps and technology instead of older heating such as gas.

We can provide lamps that will fit within your existing machinery to drive a better performance, or work on bespoke solutions with you.

**Discover** how we can help revolutionise your manufacturing processes through **energy efficiency savings, enhanced productivity**, and **elevate the quality** of your products.

# Benefits

## Why use Infrared in Textile Manufacturing

### EFFICIENT & FASTER DRYING

IR Heat penetrates textile materials directly. This results in faster drying times compared to conventional methods, leading to increased productivity

### ENERGY EFFICIENCY

IR is more energy-efficient compared to traditional heating methods because it directly transfers heat to the material without heating the surrounding air. This reduces energy waste and operational costs for textile manufacturers.

### ENHANCED QUALITY

By drying textiles evenly and gently, infrared technology helps maintain the integrity of fibres and dyes. This results in higher quality products with vibrant colours, improved texture, and reduced shrinkage.

# We Have A Solution For You

Our IR Lamps and Technology can be used for a number of different textile processes including:

- **Drying of dyed textiles**
- **Drying textile print onto fabrics**
- **Drying and curing of specialist fabrics**

Our lamps deliver on...

## Performance & Quality

With our R&D team we have created a unique reflector coating which gives **GREATER REFLECTIVITY** in turn optimising energy efficiency.

## Energy Efficiency

Electric IR offers a **dramatic saving on consumption** in comparison to gas alternatives.

## Competitive Pricing & Short Lead Times

We are able to offer a strong price value to you with short lead times.

## Existing System Compatibility

Our lamps will fit within your existing systems.

## Gold Reflector Coated Lamps

- Variety of wavelengths
- Range of sizes

## UV CURING

- Traditional UV Curing Lamps
- UV-LED Modules

We also manufacture UV Lamps & Technology for curing. Not only do we offer traditional UV curing lamps, we also make UV-LED units for the ultimate energy efficient process.

# VICTORY

SOLUTIONS

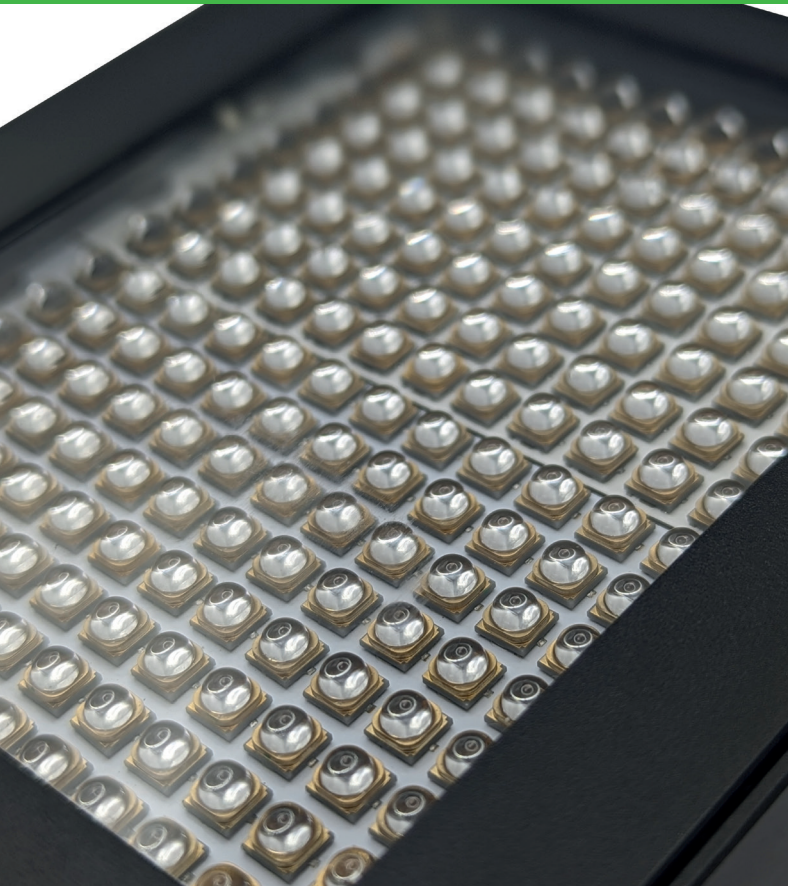

We can also provide bespoke, 'made to measure' solutions for your exact business needs & challenges. Especially if you are still using expensive to run, and environmentally harmful systems like gas.

You will work with our experienced R&D and Commercial team to create the best possible outcome for your business needs to:

IMPROVE EFFICIENCY

INCREASE PRODUCTIVITY

DRIVE A BETTER BOTTOM LINE

Together, let's **unlock** new levels of **efficiency, productivity, and quality** in your textile process.
